TechCorp IAM Platform Implementation Plan

Identity and Access Management Strategy Roadmap

Project Objectives

- Strengthen cybersecurity through centralized identity management
- Improve user lifecycle management and access control
- Enable secure integration with enterprise and cloud systems
- Support TechCorp’s digital transformation

IAM Implementation Roadmap

- Phase 1: Assessment and Planning
- Phase 2: IAM Architecture and Design
- Phase 3: Platform Integration
- Phase 4: Security Testing
- Phase 5: Deployment and Training
- Phase 6: Monitoring and Optimization

Integration Challenges and Solutions

- Legacy system compatibility challenges
- Third-party application authentication issues
- Cloud identity federation complexities
- Use APIs, connectors, and identity federation to integrate systems securely

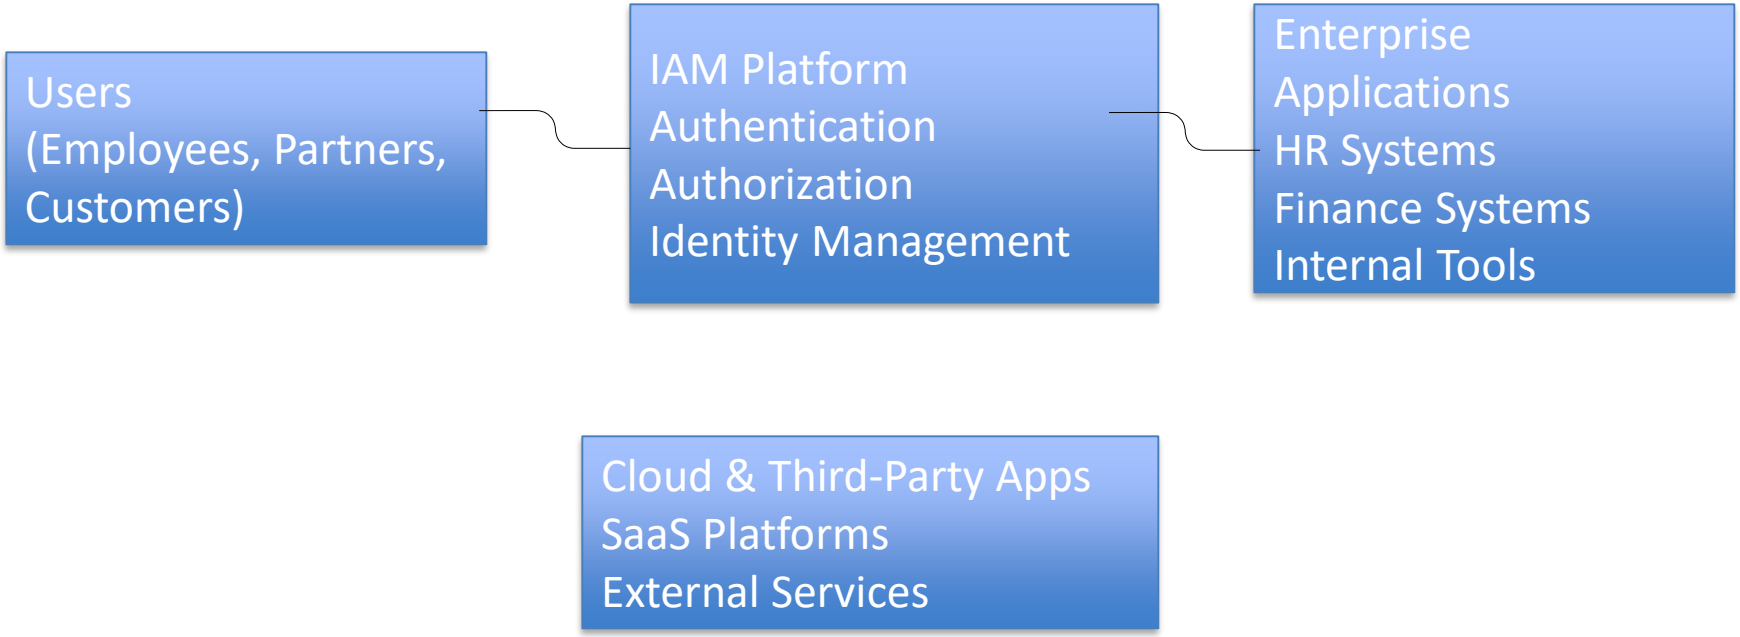
Security Controls

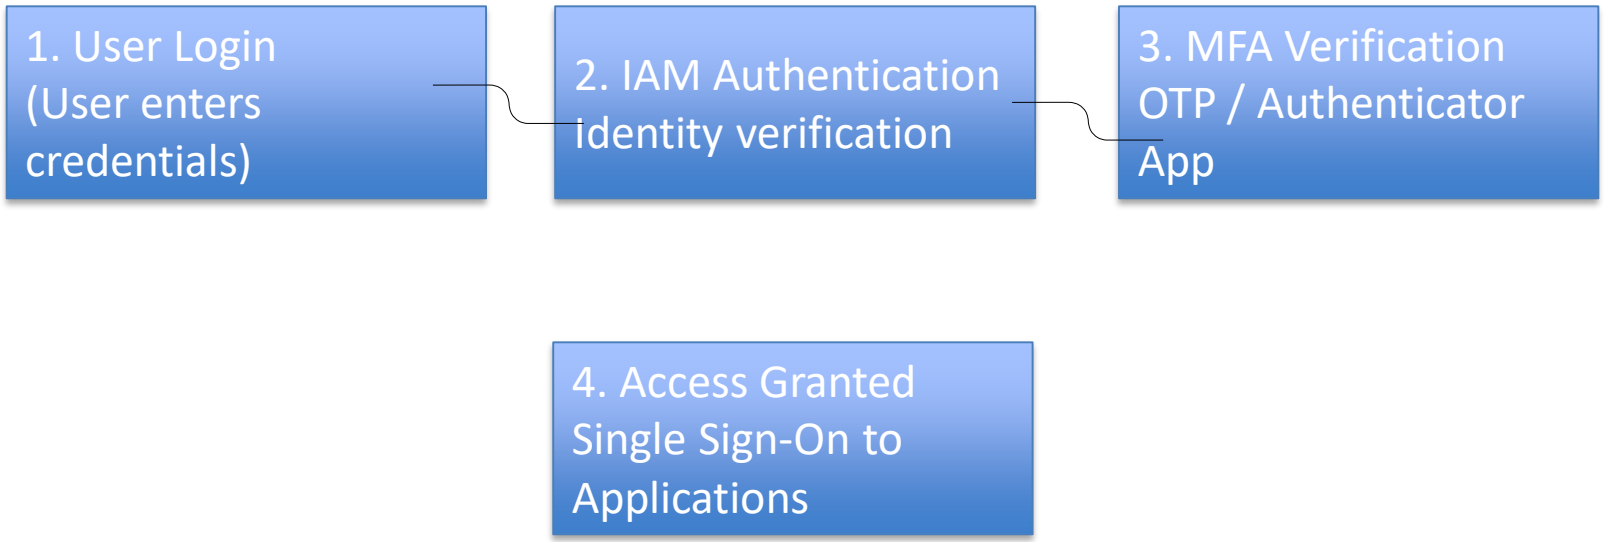
- Role-Based Access Control (RBAC)
- Least Privilege Access Policy
- Multi-Factor Authentication (MFA)
- Continuous monitoring and user activity auditing

Alignment with Business Goals

- Protect TechCorp digital assets and sensitive data
- Improve operational efficiency through automation
- Enhance user experience through secure access
- Support global operations and scalability

IAM Architecture Overview





SSO and MFA Authentication Flow
